Answer:-

flag{g0t_1t_in_pLAin_sight}

Procedure:-

Challenge.png -> found crc mismatch -> investigated -> corrected image height in IHDR payload from 800 to 850 -> removed extra 12 IEND chunk bytes from IHDR payload that had cause crc mismatch -> got the repaired png

Tools Used:-

1. https://patorjk.com/image-glitcher/ [as hex-editor]
2. https://lazytools.io/image/png-chunk-viewer/ [as crc checker]
3. claude.ai [analyzing hex-dump]
4. Python to run scripts

flag{g0t_1t_in_pLAin_sight}
